Emerging Technologies Used in Recruitment Process at ICICI Prudential Life Insurance Co. Ltd., Latur.

Dr. Yogendra B. Kamble (Ph.D., M.Phil., MBA, M.COM,)

Assistant Professor, College of Computer Science and Information Technology, COCSIT-Campus, Latur, Maharashtra, India

ABSTRACT: The rapid development of digital technologies has transformed human resource management, particularly the recruitment and selection process. The insurance sector, which traditionally depended heavily on personal networks, field recruitment, employment agencies and face-to-face interactions, is increasingly adopting technologies such as Artificial Intelligence (AI), Machine Learning (ML), Applicant Tracking Systems (ATS), digital assessments, video interviews, recruitment portals, social-media recruitment, data analytics, automation and digital onboarding.

The present study examines the role of emerging technologies in the recruitment process in the insurance sector of Latur District, Maharashtra, with special reference to ICICI Prudential Life Insurance Company Limited, Latur. The study adopts a descriptive and analytical approach based primarily on secondary information, company disclosures, government sources and recent academic literature. ICICI Prudential provides an especially relevant case because the company has developed an end-to-end digital recruitment and onboarding ecosystem. Its FY2026 disclosures describe the use of an in-house Applicant Tracking System (ATS), **iSmarthire**, employee referral technology through the **Talent@Hunt** portal, digital sourcing, career-website screening, video job descriptions, realistic job previews, digital KYE, digital verification and integration with digital public infrastructure. The study finds that emerging technologies can improve recruitment speed, candidate reach, process standardisation, documentation, screening and candidate experience. At the same time, challenges relating to algorithmic bias, data privacy, cybersecurity, digital literacy, transparency and excessive dependence on automated decision-making remain important. Recent research similarly emphasizes that AI can increase recruitment efficiency while creating risks concerning fairness, explainability and human oversight.

The study concludes that technology should complement rather than completely replace human judgement in insurance recruitment. For a district such as Latur, an effective recruitment model should combine digital recruitment with local human interaction, particularly for customer-facing and sales positions.

KEYWORDS: Artificial Intelligence, Recruitment, Insurance Sector, Applicant Tracking System, Machine Learning, Digital Recruitment, ICICI Prudential Life Insurance, Latur District, HR Technology, Talent Acquisition.

I. INTRODUCTION

Human resources constitute one of the most important resources of an insurance organisation. Insurance companies depend on employees, advisors, sales executives, managers and other professionals to acquire customers, provide services, manage policies and maintain long-term relationships. Consequently, the ability to attract and select suitable personnel is strategically important. Traditionally, recruitment in insurance organisations relied on newspaper advertisements, employment exchanges, referrals, recruitment agencies, walk-in interviews and personal networks. The growth of internet connectivity, smartphones, social media, cloud computing, Artificial Intelligence and data analytics has substantially changed these practices.

Today, recruitment can involve a digital journey beginning with online sourcing and continuing through automated screening, assessments, interviews, background verification, selection and digital onboarding. Recent research identifies AI, machine learning, natural-language processing, automated applicant tracking, chatbots and data analytics as important components of technology-enabled recruitment. The transformation is particularly significant in insurance because insurance organisations often recruit employees and sales personnel at considerable scale. Recruitment technology can

| ISSN: 2394-2975 | www.ijarety.in| | Impact Factor: 9.971| A Bi-Monthly, Double-Blind Peer Reviewed & Refereed Journal |

|| Volume 13, Issue 6, November - December 2026 ||

DOI:10.15680/IJARETY.2026.1306005

enable organisations to reach candidates beyond geographical boundaries, process large numbers of applications and standardise hiring procedures.

1.1 Insurance Sector in India

India has a large and diverse insurance industry regulated by the Insurance Regulatory and Development Authority of India (IRDAI). IRDAI is responsible for protecting policyholders and regulating, promoting and ensuring the orderly growth of the insurance industry. IRDAI

The sector includes life insurance and general/non-life insurance companies, together with numerous distribution channels such as individual agents, corporate agents, brokers, bancassurance and digital platforms. Technological transformation is increasingly visible across the insurance value chain. Although technology was initially concentrated on customer service and policy administration, its application now extends to underwriting, fraud detection, risk assessment, distribution, employee management and recruitment.

1.2 Insurance Sector in Latur District

Latur is an important district in the Marathwada region of Maharashtra. According to Maharashtra Government statistics, the district has an area of approximately 7,157 sq. km. and a population of 2,454,196 according to Census 2011-based district information. MahaDes

The district has an important agricultural base and a mixture of urban and rural population. This socio-economic structure makes recruitment in the insurance sector distinctive. Insurance organisations need personnel who can operate effectively in both urban markets and surrounding semi-urban/rural areas. Historical Maharashtra Government data also demonstrates the existence of a substantial insurance market and agency network in Latur. For example, district statistics for 2011–12 recorded both LIC and private insurance company branches and thousands of insurance policies and agents. MahasDB

The recruitment environment has subsequently become much more technology-oriented.

II. PROFILE OF ICICI PRUDENTIAL LIFE INSURANCE COMPANY LIMITED

ICICI Prudential Life Insurance Company Limited is one of India's prominent private-sector life insurers.

The company's official careers platform provides opportunities through two broad routes: joining as an employee and joining as an advisor. ICICI Life Insurance

The company has adopted technology extensively in its business and human-resource processes. Its Latur branch is listed by the company at:

ICICI Prudential Life Insurance Company Limited >Insurance company >The company's listed Latur location is in Deshpande Complex on Ausa Road, Latur. campaign.iciciprulife.com

2.1 Digital Transformation of Recruitment

ICICI Prudential's earlier digital HR initiatives included technology-enabled candidate selection and paperless employee onboarding. The company described an approach in which candidates were provided information about frontline sales roles through a digital platform called **iSail**, allowing candidates to understand the nature and challenges of the role before making a career decision. BSE India >This is important because recruitment technology is not limited to simply collecting applications. It can also be used to improve **job understanding, self-selection and candidate-job fit**.

2.2 Current Recruitment Technology

The company's FY2025–26 reporting provides particularly useful evidence for this study.

ICICI Prudential states that it uses an **in-house Applicant Tracking System (ATS), iSmarthire**, for lateral hiring and recruitment through external recruitment intermediaries. It also operates an employee referral programme through the **Talent@Hunt** portal. NSE India Archives

The company reports that employee referrals represented **16% of the total sourcing mix in FY2026**. NSE India Archives

Its career website is also used to source and screen applicants. The company reports the use of:

>Video job descriptions >Realistic job previews >Candidate profile markers
>Digital sourcing >Standardised candidate journeys >Digital KYE
>Digital verification >Digital documentation
>Integrated recruitment and onboarding processes. NSE India Archives

| ISSN: 2394-2975 | www.ijarety.in| | Impact Factor: 9.971| A Bi-Monthly, Double-Blind Peer Reviewed & Refereed Journal |

|| Volume 13, Issue 6, November - December 2026 ||

DOI:10.15680/IJARETY.2026.1306005

The company further reports that approximately **9% of total employees hired in FY2026 were sourced from the career website and other digital media**. NSE India Archives
These developments make ICICI Prudential a useful case for examining emerging recruitment technologies.

III. EMERGING TECHNOLOGIES USED IN RECRUITMENT

3.1 Applicant Tracking Systems

An Applicant Tracking System is software used to collect, organise, filter and manage candidate applications.
An ATS can help recruiters:
1.Receive applications digitally. 2. Store candidate information. 3.Search candidate profiles. 4.Track recruitment stages. 5.Schedule interviews. 6.Maintain recruitment records. 7.Communicate with candidates. 8.Generate recruitment reports.
ICICI Prudential's **iSmarthire** is an example of an organisation-specific ATS used as part of its recruitment process. NSE India Archives

3.2 Artificial Intelligence

Artificial Intelligence can support recruitment through:
>Automated resume screening >Candidate matching >Job recommendation >Chatbots >Candidate communication >Interview scheduling >Predictive analytics >Skills identification >Recruitment analytics
Recent research indicates that AI-enabled recruitment can increase efficiency and support data-driven decision-making, but human oversight remains necessary because algorithmic systems may reproduce biases contained in historical data. ScienceDirect

3.3 Machine Learning

Machine Learning can identify patterns in large candidate datasets.
For example, a recruitment system can potentially learn from:
>Previous recruitment outcomes >Candidate qualifications >Experience >Skills >Assessment results >Job performance indicators
The technology can then support candidate matching.
However, using historical recruitment data without adequate monitoring can reproduce previous selection biases.

3.4 Recruitment Chatbots

Chatbots can communicate with candidates through websites and messaging platforms.
They can:
>Answer frequently asked questions >Explain vacancies >Collect candidate details >Provide application status >Schedule interviews >Communicate recruitment instructions
Conversational AI is increasingly becoming a significant component of digital HR systems. Recent research identifies AI chatbots and automated coordination as important recruitment applications. ScienceDirect

3.5 Video Interviews

Video interviews allow recruiters to assess candidates without requiring physical presence.
Benefits include:
>Reduced travel >Wider geographical reach >Faster scheduling >Lower recruitment costs >Greater convenience
Video-based recruitment is especially useful where candidates are distributed across urban and rural areas. However, video interviews should not automatically be assumed to provide objective assessments. Technology, internet connectivity, camera quality and candidate familiarity with digital platforms can influence performance.

3.6 Social Media Recruitment

Platforms such as LinkedIn and other social networks provide recruiters with access to potential candidates.
Social-media recruitment can:
>Increase employer visibility >Reach passive candidates >Promote vacancies >Strengthen employer branding >Target particular professional groups
For insurance organisations, digital recruitment can help extend recruitment beyond conventional local networks.

| ISSN: 2394-2975 | www.ijarety.in| | Impact Factor: 9.971| A Bi-Monthly, Double-Blind Peer Reviewed & Refereed Journal |

|| Volume 13, Issue 6, November - December 2026 ||

DOI:10.15680/IJARETY.2026.1306005

3.7 Digital Assessments

Online assessments may measure:

>Aptitude >Numerical ability >Communication >Reasoning >Personality >Sales orientation >Job-related skills

For insurance sales positions, realistic job previews and assessments can help candidates understand whether the role matches their expectations.

3.8 Digital Background Verification

Modern recruitment systems increasingly integrate digital identity and verification processes.

ICICI Prudential's FY2026 disclosure states that its hiring process uses **Digital KYE** and strengthened risk checks, including integration with systems for criminal verification and credit checks. It also reports integration with Aadhaar, UAN and DigiLocker to streamline documentation and reduce onboarding time. NSE India Archives

IV. REVIEW OF LITERATURE

4.1 AI and Recruitment

A 2023 systematic literature review found that AI is increasingly applied to HR activities including recruitment, candidate screening, performance assessment and employee engagement. The literature identifies efficiency and improved decision support as important potential benefits. ScienceDirect

4.2 AI-Enabled HR Recruitment

A 2024 scoping review examined academic research on AI-enabled HR recruitment and classified applications according to benefits, challenges and functionalities. It highlighted the importance of data security, privacy and human decision support alongside technological capabilities. ScienceDirect

4.3 Automated Hiring Systems

A 2025 systematic literature review of 40 peer-reviewed studies concluded that machine-learning approaches continued to dominate practical automated hiring applications, while newer technologies such as LLM-based and hybrid systems were less widely implemented. The study also identified data accessibility, ethical accountability and implementation costs as constraints. ScienceDirect

4.4 AI and Data-Driven HR

A 2026 systematic review found that AI technologies such as machine learning, deep learning, NLP, generative AI and big-data analytics are reshaping HR decision-making. However, organisational resistance, algorithmic bias, transparency and data integration remain significant challenges. ScienceDirect

4.5 Emerging Research Direction

Recent literature increasingly argues that AI recruitment should be treated as a **socio-technical process** rather than simply a technology implementation. Human actors, technology developers, organisations and candidates all influence how AI recruitment works in practice. ScienceDirect

V. RESEARCH GAP

The existing literature contains considerable research on AI and technology-enabled recruitment at national and international levels. However, relatively limited empirical research is available concerning:

1. Technology-enabled recruitment in smaller cities and districts.
2. Recruitment technology in the insurance sector of Latur District.
3. Employee and recruiter perceptions of emerging recruitment technologies in Latur.

VI. STATEMENT OF THE PROBLEM

The recruitment process in insurance organisations is becoming increasingly technology-driven. Organisations are adopting digital platforms, ATS, AI, online assessments, video interviews and digital onboarding to improve recruitment efficiency.

However, the effectiveness of these technologies may vary according to organisational structure, candidate awareness, digital literacy, geographical conditions and the nature of insurance jobs.

| ISSN: 2394-2975 | www.ijarety.in| | Impact Factor: 9.971| A Bi-Monthly, Double-Blind Peer Reviewed & Refereed Journal |

|| Volume 13, Issue 6, November - December 2026 ||

DOI:10.15680/IJARETY.2026.1306005

The problem addressed by the present study is therefore:
To examine the role, effectiveness, opportunities and challenges of **Emerging Technologies Used in Recruitment Process at ICICI Prudential Life Insurance Co. Ltd., Latur.**

VII. OBJECTIVES OF THE STUDY

Primary Objective
To study the impact of emerging technologies on the recruitment process in the insurance sector of Latur District with special reference to ICICI Prudential Life Insurance Co. Ltd., Latur.

Secondary Objectives
1. To identify emerging technologies used in insurance recruitment.
2. To study the role of ATS in recruitment.
3. To examine the role of AI and automation in candidate screening.
4. To study the use of digital recruitment platforms.
5. To examine the role of video interviews and online assessments.
6. To study digital onboarding and verification.
7. To examine the benefits of technology-enabled recruitment.
8. To identify challenges associated with digital recruitment.
9. To understand the importance of human judgement in technology-enabled recruitment.
10. To suggest measures for improving technology-enabled recruitment in the insurance sector of Latur District.

VIII. RESEARCH QUESTIONS

1. What emerging technologies are used in insurance recruitment?
2. How does technology affect the speed of recruitment?
3. Does technology improve candidate sourcing?
4. How useful is an ATS in managing recruitment?
5. What role can AI play in candidate screening?
6. What are the major challenges associated with technology-enabled recruitment?
7. How can insurance companies balance technology and human judgement?

IX. RESEARCH METHODOLOGY

9.1 Research Design
The study follows a **descriptive and analytical research design**.
The descriptive component examines the technologies used in recruitment, while the analytical component can examine relationships between technology adoption and recruitment outcomes after primary data collection.

9.2 Nature of Data
Secondary Data
Secondary information has been obtained from:
>ICICI Prudential annual reports >ICICI Prudential career information >IRDAI publications >Government of Maharashtra sources >Academic journals >Research papers >Industry publications
IRDAI maintains annual reports documenting developments in the Indian insurance sector. IRDAI

Primary Data
For an empirical version of this study, primary data was collected from:
>HR/recruitment personnel >Branch managers >Sales managers >Employees involved in recruitment >Recently recruited employees >Job applicants/candidates

9.3 Population
The population comprises employees/recruiters and relevant candidates associated with insurance recruitment in Latur District.

| ISSN: 2394-2975 | www.ijarety.in| | Impact Factor: 9.971| A Bi-Monthly, Double-Blind Peer Reviewed & Refereed Journal |

|| Volume 13, Issue 6, November - December 2026 ||

DOI:10.15680/IJARETY.2026.1306005

X. CONCEPTUAL FRAMEWORK

The proposed conceptual framework is:
Emerging Recruitment Technologies
↓
AI + ML + ATS + Online Recruitment + Video Interview + Digital Assessment + Social Media + Digital Verification + Automation
↓
Recruitment Process
↓
Candidate Sourcing → Screening → Assessment → Interview → Selection → Verification → Onboarding
↓
Recruitment Outcomes
>Recruitment speed >Recruitment cost >Candidate reach >Quality of hire
>Candidate experience >Process standardisation >Data accuracy
The relationship is influenced by:
Human judgement + Digital literacy + Data privacy + Algorithmic fairness + Organisational readiness

XI. TECHNOLOGY-ENABLED RECRUITMENT AT ICICI PRUDENTIAL

ICICI Prudential's documented recruitment practices provide a useful illustration of this framework.

11.1 Applicant Tracking System

The company's in-house **iSmarthire ATS** supports lateral recruitment and interaction with recruitment intermediaries. NSE India Archives

11.2 Employee Referral Technology

The **Talent@Hunt** portal supports employee referrals. The company reported that referrals contributed 16% of the sourcing mix in FY2026. NSE India Archives

11.3 Career Website

The career website is used for candidate sourcing and screening. The company reports that around 9% of employees hired in FY2026 came through the career website and other digital media. NSE India Archives

11.4 Video Job Descriptions

Video job descriptions help communicate job responsibilities and expectations to candidates before selection. NSE India Archives

11.5 Realistic Job Previews

Realistic job previews help candidates understand the actual requirements of customer-facing roles.
This approach can reduce the possibility of candidates accepting positions without understanding the nature of the work.

11.6 Digital KYE

Digital Know Your Employee processes strengthen recruitment prudence and verification. NSE India Archives

11.7 Digital Documentation

Integration with Aadhaar, UAN and DigiLocker can streamline documentation and reduce onboarding-cycle time. NSE India Archives

XII. BENEFITS OF EMERGING TECHNOLOGIES IN RECRUITMENT

12.1 Faster Recruitment

Automation reduces repetitive administrative work.

12.2 Wider Candidate Reach

Online recruitment enables insurance companies to reach candidates throughout Latur District and beyond.

| ISSN: 2394-2975 | www.ijarety.in| | Impact Factor: 9.971| A Bi-Monthly, Double-Blind Peer Reviewed & Refereed Journal |

|| Volume 13, Issue 6, November - December 2026 ||

DOI:10.15680/IJARETY.2026.1306005

12.3 Reduced Administrative Burden
ATS platforms reduce manual record keeping.

12.4 Improved Candidate Tracking
Recruiters can monitor candidates at different stages of recruitment.

12.5 Better Candidate Experience
Digital communication can provide candidates with faster information and clearer recruitment processes.

12.6 Standardisation
Digital systems can make recruitment procedures more consistent across branches and locations.

12.7 Better Data Management
Recruitment systems allow organisations to maintain structured candidate information.

12.8 Improved Verification
Digital verification can strengthen compliance and reduce documentation-related delays.

12.9 Employer Branding
Career websites, social media and digital content allow organisations to communicate their employer value proposition.

XIII. CHALLENGES OF TECHNOLOGY-ENABLED RECRUITMENT

13.1 Algorithmic Bias
AI systems may reproduce bias present in historical recruitment data. Recent research specifically identifies algorithmic bias and fairness as important concerns. ScienceDirect

13.2 Data Privacy
Recruitment involves sensitive personal information such as identity documents, educational records and employment history.

13.3 Cybersecurity
Large candidate databases can become targets for cyberattacks.

13.4 Digital Divide
Candidates with limited digital skills or weak internet connectivity may face disadvantages.

13.5 Lack of Human Interaction
Insurance sales jobs require communication, interpersonal skills and relationship-building. Excessive automation may fail to assess these qualities adequately.

13.6 Technology Resistance
Recruiters and candidates may resist new technologies because of lack of familiarity.

13.7 Transparency
Candidates may not understand how automated systems evaluate their applications.

13.8 Overdependence on Automation
AI should support rather than completely replace professional HR judgement.
Recent scholarship strongly supports a balanced human–AI approach and emphasizes transparency and interpretability. ScienceDirect

XIV. RELEVANCE OF EMERGING TECHNOLOGIES TO LATUR DISTRICT

Technology-enabled recruitment can be particularly valuable in Latur because the district combines urban and rural populations. Latur district has a predominantly agricultural socio-economic base, while Latur city functions as the district headquarters and an important educational and commercial centre. This creates several recruitment opportunities.

| ISSN: 2394-2975 | www.ijarety.in| | Impact Factor: 9.971| A Bi-Monthly, Double-Blind Peer Reviewed & Refereed Journal |

|| Volume 13, Issue 6, November - December 2026 ||

DOI:10.15680/IJARETY.2026.1306005

For urban candidates
Digital recruitment can provide:
>Online applications >Online interviews >Digital assessments >Faster communication >Career information

For rural/semi-urban candidates
Technology can:
>Reduce travel requirements >Provide access to employment opportunities >Facilitate remote interviews >Improve access to job information
However, digital recruitment should not completely replace local recruitment interaction.

XV. FINDINGS

Based on the documented technology practices of ICICI Prudential and the broader academic literature, the study is identifying the following broad patterns.

1. ATS technology is likely to improve recruitment administration.
2. Digital sourcing can expand the candidate pool.
3. Video job descriptions can improve candidate understanding of insurance roles.
4. Online recruitment can reduce geographical barriers.
5. Digital verification can improve documentation efficiency.
6. AI can support screening and recruitment decision-making.
7. Technology can improve recruitment speed.
8. Candidates may value convenience and faster communication.
9. Some candidates may have concerns about privacy and automated evaluation.
10. Human interaction remains important for customer-facing insurance roles.
11. Digital literacy may influence candidate acceptance of technology.
12. A hybrid recruitment model is likely to be more appropriate than complete automation.

XVI. SUGGESTIONS

16.1 Strengthen AI-Assisted Recruitment
Insurance companies should use AI for routine screening while retaining human review for important selection decisions.

16.2 Improve Candidate Communication
Automated communication should be clear, simple and available in forms accessible to candidates from different educational backgrounds.

16.3 Develop Local Digital Recruitment Campaigns
For Latur, companies can combine online recruitment with recruitment drives at colleges, educational institutions and employment networks.

16.4 Use Realistic Job Previews
Realistic previews are particularly valuable for insurance sales roles because they allow candidates to understand field work and customer-facing responsibilities.

16.5 Strengthen Data Protection
Candidate data should be protected through appropriate access controls, encryption, retention policies and security practices.

16.6 Maintain Human Oversight
AI-based recommendations should be reviewed by trained HR professionals.

16.7 Train Recruiters
Recruiters should receive training in: *>ATS >AI tools >Data interpretation >Digital interviewing >Cybersecurity >Ethical recruitment*

| ISSN: 2394-2975 | www.ijarety.in| | Impact Factor: 9.971| A Bi-Monthly, Double-Blind Peer Reviewed & Refereed Journal |

|| Volume 13, Issue 6, November - December 2026 ||

DOI:10.15680/IJARETY.2026.1306005

16.8 Reduce Digital Exclusion
Companies should provide alternative support mechanisms for candidates who face difficulty using digital recruitment platforms.

16.9 Monitor Algorithmic Fairness
Recruitment algorithms should periodically be reviewed for unintended discrimination or systematic exclusion.

16.10 Build a Hybrid Recruitment Model
The most suitable model for Latur may be:
Digital sourcing + AI-assisted screening + online assessment + human interview + digital verification + personal onboarding support.

XVII. CONCLUSION

The recruitment process in the insurance sector is undergoing a fundamental transformation. Technologies such as Artificial Intelligence, Machine Learning, Applicant Tracking Systems, online assessments, video interviews, digital verification, automation and data analytics are changing how organisations attract, evaluate and onboard employees.

ICICI Prudential Life Insurance provides a strong example of this transformation. Its documented use of the **iSmarthire ATS**, **Talent@Hunt**, digital sourcing, career-website screening, video job descriptions, realistic job previews, Digital KYE and digitally integrated documentation demonstrates that recruitment is becoming part of an end-to-end digital employee lifecycle. NSE India Archives For Latur District, technology presents considerable opportunities. It can extend recruitment to candidates across urban and rural areas, reduce travel and administrative costs, improve candidate communication and accelerate recruitment.

Nevertheless, recruitment technology cannot completely replace human judgement. Insurance jobs, particularly sales and customer-facing positions, require communication ability, empathy, persuasion, trust-building and interpersonal skills that cannot always be adequately evaluated through automated systems.

The future of recruitment in the Latur insurance sector is therefore likely to be **human-centred digital recruitment** rather than complete automation. AI and other technologies should perform repetitive, data-intensive and administrative tasks, while HR professionals should retain responsibility for judgement, fairness, candidate relationships and final selection.

In conclusion, emerging technologies can make insurance recruitment **faster, broader, more standardised and data-driven**, but their successful implementation depends on responsible governance, data security, digital inclusion, transparency and an appropriate balance between technology and human judgement.
